

W5 Final Submission

FlyRank Internship - Backend Track - Week 5 Assignment A9

The polite scraper

Generated: 2026-09-06

Submission Link

origin https://github.com/Harshini-priya989/FlyRank_W1_A3_Containerized_Postgres (fetch)

origin https://github.com/Harshini-priya989/FlyRank_W1_A3_Containerized_Postgres (push)

Result

- Valid unique records: 60
- Failed pages recorded: 1
- Catalogue pages: 3
- Discovered URLs: 60
- Cache hits on latest rerun: 63

Evidence

- Target is Books to Scrape, a public scraping practice sandbox.
- Scope is limited to the first three catalogue pages.
- robots.txt result is documented as 404/no robots file found.
- Every real request sends a clear user-agent, timeout, status check, cache, and delay.
- Each book record is normalized and validated with Pydantic before storage.
- A deliberate bad URL is skipped and reported while the 60 good records survive.
- The README includes schema, run command, politeness rules, ethics note, limitation, and report.

Run Report

```
{

  "finished_at": "2026-09-06T14:25:28.673456Z",
  "duration_seconds": 7.11,
  "target": "https://books.toscrape.com/",
  "robots_result": "no robots file found (status 404)",
  "catalogue_pages": 3,
  "discovered_urls": 60,
  "attempted_detail_pages": 61,
  "pages_fetched": 0,
  "cache_hits": 63,
  "valid_records": 60,
  "invalid_records": 0,
  "failed_pages": 1,
  "failed_page_details": [
    {
      "url": "https://books.toscrape.com/catalogue/this-page-is-deliberately-missing/index.html",
      "reason": "status 404"
    }
  ],
  "user_agent": "FlyRankInternship-A9/1.0 (+https://github.com/Harshini-priya989/FlyRank_W1_A3_Containerized_Postgres)",
  "timeout_seconds": 8,
  "delay_seconds": 0.55
}
```

Files To Submit

- GitHub repository URL.
- scraper/README.md
- scraper/src/main.py
- scraper/output/books.json
- scraper/output/run-report.json
- scraper/output/errors.json
- docs/w5-final-submission.pdf, if the form asks for a document.

Checklist

W5 A9 submission checklist

- [X] Scraper folder with README, requirements, and entry file
- [X] Target classification documents Books to Scrape sandbox
- [X] Scope limited to first 3 catalogue pages
- [X] Robots result documented
- [X] Honest user-agent configured
- [X] Timeout configured
- [X] Cache writes HTML and reruns use cache
- [X] Discovers 3 catalogue pages
- [X] Discovers 60 unique book URLs
- [X] Extracts title, product URL, price text, availability text, rating text, description, source page, fetched_at
- [X] Normalizes numeric `price\_gbp`
- [X] Normalizes numeric `rating`
- [X] Validates records with Pydantic
- [X] Writes `output/books.json`
- [X] Writes `output/errors.json`
- [X] Writes `output/run-report.json`
- [X] Keeps cache out of Git
- [X] Deliberately broken URL is skipped and reported
- [X] README includes run command
- [X] README includes schema
- [X] README includes politeness rules
- [X] README includes ethics note
- [X] README includes honest limitation
- [X] README includes real run report
- [X] Final output has 60 valid unique records
